

Background

Continental offers a number of aluminum diffusers for sidewall and ceiling applications. Recently, a portion of the product line underwent some re-engineering for both aesthetic and functional purposes.

Models Affected

The following models have been improved:

- ❑ Series A22—Lanced face; 2-way deflection; multi-shutter damper
- ❑ Series A23—Lanced face; 3-way deflection; multi-shutter damper
- ❑ Series A24—Lanced face; 4-way deflection; multi-shutter damper
- ❑ Series AC1H—Curved Blade; 1-way deflection; multi-shutter damper
- ❑ Series AC2H—Curved Blade; 2-way deflection; multi-shutter damper
- ❑ Series AC3—Curved Blade; 3-way deflection; multi-shutter damper
- ❑ Series AC4—Curved Blade; 4-way deflection; multi-shutter damper
- ❑ Series AC44—Curved Blade; 4-way deflection; multi-shutter damper

Improvements

Improvements consist of a new rivet-free face and new 1" damper blades.

Previous models riveted the damper box to the diffuser face. Spot welding now creates a cleaner look.

Previous models used 2" damper blades. New 1" blades extend less obtrusively into shallow duct applications.

See the differences on the reverse side of this sheet.

Same Great Quality

Continuous product line improvement is one of the hallmarks of Continental quality. It is what we have undertaken for more than 50 years. And, it is what gives us the confidence to say: "Compare our products to any other brand and see the quality difference for yourself."

Rivet-Free Face

The riveted damper box (top) has been replaced by new spot welding procedures (bottom).

1" Damper Blades

Installed depth of previous models (top), with blades extended, was 2.25 inches. The new (bottom) installed depth is only 1.625 inches.
