Company Profile

With roots to 1892, Continental Industries is a privately held pioneer in the design and production of air distribution products and venting solutions for residential and commercial applications. Air distribution products consist of registers, grilles, diffusers and related accessories. Under the AirJet line, the company produces venting and chimney systems for hearth and HVAC use. All products are designed and manufactured in the U.S.A.

"The aspirations of every building." This theme speaks to the product line delivered by Continental Industries. Every building breathes. These "aspirations" include the inhalations and exhalations of forced air as well as the venting of exhaust gas. Whether residential, commercial or institutional in nature, the aspirations of every building call for the quality of Continental products.

Registers, Grilles and Diffusers

This line of air distribution products was born of the 110-year history of Auer Register and the 50+ years of Continental Register history. The products are distinguished by patented designs and contractor-friendly innovations, and are available in steel, aluminum and composite plastic.

Innovations in steel and aluminum include the patented wraparound collar of many of our register and diffuser models as well as spring-loaded dampers. The collar design ensures rigidity and strength. Spring-loaded dampers on these products also mean rattle-free and reliable operation.

Innovations in plastic include the removable snap-in face plate of our round and square ceiling diffusers. This design, versatile enough for 6-, 7- or 8-inch flexible duct, offers a variety of throw patterns and provides for super-fast installation as well as a finished look.

Venting and Chimney Systems

Sixty-plus years of AirJet quality goes into our line of venting systems components. The AirJet line includes B-vent, L-vent and all-fuel venting as well as venting for pellet stoves. Flexible components and chimney liners are branded under the "FlexJet" series. Chimney components and housings round out the line. For commercial applications, AirJet B-vent pipe is available in diameters up to 48 inches.

These products feature the most installer-friendly system on the market – Snap-Lock. Assembly is as easy as aligning the seams of each piece and pushing the pieces together. The resulting "snap" has been a favorite sound among contractors for decades.

You can discover more about our complete line of air distribution products and venting solutions at what is becoming the most contractor-friendly website on the Internet: www.continentalindustries.com.
